

TEST EXECUTION SUMMARY

PharmaTrack – Customer-Facing E-Commerce

This test plan outlines the comprehensive manual testing strategy for PharmaTrack's customer-facing e-commerce platform. The focus is on validating functional requirements, user workflows, and user experience without including backend admin/pharmacist features.

Document Information

Document Title	Test Execution Summary - PharmaTrack
Version	1.0
Date	7/4/2026
Prepared By	Mohammad Waarits Harahap

1. Executive Summary

PharmaTrack manual testing has been completed with comprehensive coverage across all customer-facing features. A total of 74 test cases were executed across 7 functional modules, achieving 72 total pass tests and only 2 failed tests. The system demonstrates solid functionality and is ready for production deployment. The minor issues identified in edge case tests do not block production readiness.

2. Testing Overview

Manual functional testing was conducted using black-box methodology on the live production environment. Testing focused on customer-facing features including authentication, product catalog, product details, shopping cart, checkout process, order history, and AI chatbot functionality. The test environment used is MacBook 2015 with macOS 12.7.4 and Google Chrome version 148.0.7778.168. All test cases followed positive, negative, and edge case scenarios to ensure comprehensive coverage.

3. Test Results Summary

Total Test Cases	PASS	FAIL	Pass Rate
74	72	2	97.3%

4. Results by Module

Module	Module Name	Total TC	Positive	Negative	Edge Case	Failed Test
M01	Authentication	15	7	6	2	1
M02	Product Catalog & Search	13	9	3	1	0
M03	Product Details	6	5	1	0	0
M04	Shopping Cart	13	7	4	2	0
M05	Checkout Process	11	5	4	2	1
M06	Order History	8	5	2	1	0
M07	AI Chatbot	8	4	3	1	0
TOTAL		74	42	23	9	2

5. Visual Chart

The following charts provide a visual breakdown of test execution results across severity levels, test types, and test status:

6. Findings

During testing, 2 test cases failed, primarily related to input validation on edge cases. Two failures occurred in form fields that accept very long input (TC-AUTH-015: Register with 200+ character name input, and TC-CHK-010: Checkout notes field with 1000+ characters). These failures indicate that form fields do not currently enforce character limits, allowing unlimited input. However, these are edge cases that do not impact core functionality and do not cause system crashes or data loss. The system handles the input gracefully without adverse effects. Overall, no critical defects were identified that would block production deployment.

7. Recommendations

The pharmaTrack system demonstrates strong functionality across all customer-facing features. These are following recommendations focus on UI/UX improvements that can enhance user experience and operational efficiency:

No	Recommendation	Benefit
1	Add "Show/Hide Password" toggle button	Improves usability, reduces login errors from typos
2	Implement password strength indicator	Guides users to create strong passwords, improves security awareness
3	Implement sorting options (price, newest)	Improves product discovery, reduces browsing time
4	UI language consistency	Cleaner UX, improves user usability
5	Implement loading UI for button clicks and page transitions.	Enhances perceived performances and keep users engaged during wait time
6	Add "Ask Pharmacist" button on product page	Increases engagement, provides additional support
7	Show cart summary in sidebar/sticky bar	Improves checkout flow awareness, reduces abandonment
8	Implement quantity validation feedback	Prevents invalid orders, improves user experience
9	Implement minimum and maximum character limits on input fields.	Prevents database overflow errors and guides users to input valid data formats.
10	Add a confirmation prompt before deleting a product from the cart.	Lowers shopping cart abandonment rates caused by accidental clicks.
11	Implement a "Back" button on product detail pages.	Enhances user mobility and shortens the navigation path across the store.
12	Provide an option for users to modify their profile details	Empowers users to manage their accounts and maintains up-to-date user records.

13	Implement auto-save for form data	Reduces frustration if page closes accidentally
14	Add catalog sorting features (e.g., Price: Low to High, Top Rated).	Streamlines item discovery and enhances overall catalog browsability.
15	Add a floating "Scroll to Top" button on catalog page.	Improves page usability, reduces scrolling effort for users.

8. Conclusion

PharmaTrack has successfully completed comprehensive manual testing with a 97.3% pass rate across 74 test cases. The system demonstrates strong functionality, good user experience design, and readiness for production deployment. The identified recommendations represent enhancement opportunities to further optimize UI/UX and operational efficiency. No critical blockers or defects were identified that would prevent production release. The system is approved for immediate deployment.
