

TEST PLAN

PharmaTrack – Customer-Facing E-Commerce

This test plan outlines the comprehensive manual testing strategy for PharmaTrack's customer-facing e-commerce platform. The focus is on validating functional requirements, user workflows, and user experience without including backend admin/pharmacist features.

Document Information

Document Title	Test Plan - Pharmatrack
Version	1.0
Date	6/4/2026

1. Executive Summary

This document outlines the comprehensive test plan for PharmaTrack, a digital pharmacy management and e-commerce platform. This phase focuses on manual testing of customer-facing features without the admin and pharmacist management systems.

The primary objective is to test the quality and functionality of the customer-facing features through structured manual testing.

2. Test Scope

The testing scope defines the boundaries of what will and will not be tested during this test. This scope ensures focused testing efforts on customer-facing features while excluding backend and administrative functionalities that require different testing approaches.

2.1 In Scope

The following features and functionalities are included in this testing phase:

- Authentication module (Register, Login, Logout)
- Product catalog (Browse, Search, Filter by Category)
- Product details (Stock status, Prescription badge, Product information)
- Shopping cart (Add/Remove items, Quantity adjustment, Empty cart state)
- Checkout process (Form validation, Pickup time validation, Order creation)
- Order history (View orders, Order status display, Order tracking)
- AI Chatbot (Response generation, Language handling, Medical disclaimer)

2.2 Out of Scope

The following items are explicitly excluded from this testing phase and will be addressed in subsequent testing phases or by different teams:

- Admin/Pharmacist dashboard and management features
- Payment processing (QRIS integration and Midtrans webhook confirmation)
- Walk-in POS (Point of Sale) system
- Inventory management and batch tracking
- WhatsApp notifications

3. Test Objectives

The objectives of this manual testing phase are to systematically identify defects, validate functionality, and ensure that the system meets specified requirements and user expectations. The following goals guide the testing efforts:

1. Verify all functional requirements of customer-facing features are correctly implemented
2. Validate user workflows from homepage, product browsing to order placement
3. Identify defects and inconsistencies in UI, functionality, and user experience
4. Ensure compliance with business rules
5. Validate input validation and error handling
6. Document all findings for subsequent testing phases

4. Test Approach

The test approach describes the strategy, methodology, and techniques that will be used to conduct manual testing effectively.

4.1 Testing Methodology

Manual functional testing will be conducted using black-box testing methodology, where the tester does not know the source code and focuses on validating inputs and outputs. Exploratory testing will also be employed to identify unexpected behaviors and edge cases.

4.2 Test Levels

The following test levels will be applied during manual testing:

- Functional testing (Happy path and negative scenarios)
- User interface (UI) testing
- User experience (UX) testing and usability

4.3 Test Coverage

Test cases will comprehensively cover the following scenarios to ensure thorough validation:

- Positive test cases (Valid data, expected behaviors)
- Negative test cases (Invalid data, boundary values, error conditions)
- Edge cases (Empty fields, special characters, very long inputs)

4.4 Test Tools

The following tools and technologies will be utilized to support the testing process:

- Browser: Google Chrome (148.0.7778.168 version)
- Test documentation: Google Sheets, Google docs
- Screenshot tool: Snipping tool or built-in browser tool

5. Entry Criteria

Conditions that must be met before testing can begin:

- Test plan has been created and reviewed
- Test cases have been created and documented
- Test environment is accessible and stable
- Test data is ready (test accounts, test products)
- All prerequisites and dependencies are met

6. Exit Criteria

Conditions that must be satisfied for testing to be considered complete:

- All planned test cases have been executed
- Test execution report has been generated
- All identified defects have been documented with severity levels
- Test summary report is complete with findings and recommendations
- Documentation is ready for next testing phases

7. Test Resources

Test resources include all personnel, tools, equipment, and infrastructure required to conduct testing effectively.

7.1 Human Resources

Role	Responsibility	Count
QA Tester	Execute test cases, document results, report defects	1 person

7.2 Tools and Technologies

Tool	Purpose	Version/Details
Google Chrome	Web browser for testing	148.0.7778.168 version
Google Sheets & Docs	Test case documentation	Current version
Screenshot Tool	Capture defect evidence	Built-in or Snipping tool

7.3 Test Environment

Component	Specification	Details
Operating System	macOS Monterey	Version 12.7
Hardware	MacBook Air 2015	Intel i5, 8GB RAM
Browser	Google Chrome	Latest version
Internet Connection	Stable and reliable	Minimum 5 Mbps
Test URL	Production environment	Deployed on vercel

8. Risk Assessment

Risk assessment identifies potential challenges and uncertainties that could impact the testing process.

Risk	Probability	Impact	Severity	Mitigation
Environment unavailable	Low	High	Medium	Monitor regularly
Test data limitations	Medium	Medium	Medium	Use available data

9. Test Deliverables

Test deliverables are the tangible outputs produced during and after the testing process. These documents and reports provide evidence of testing activities and communicate findings to stakeholders:

- Test Plan Document
- Test Cases Spreadsheet
- Test Execution Summary Report
- Bug/Defect Report (with severity levels and screenshots)
- Test Metrics and Analysis
